Bayesian Workshop SCCS-NY 2026

9:00-11:45 am

Topics to be covered:

- Probability Distribution
- Bayes Theorem
- Introduction to DAG
- JAGS Model basic structure
- Priors
- Running JAGs Model
- Checking for Convergence

Software and R packages to be installed:

Install R and R Studio:

Step 1: Install R

- Use the following Link to install R.
    - Select appropriately: Windows of Mac
        - Windows: Select install R for first time
        - Mac: Which processor does your Mac have?
        - if it has M1, M2, etc, processor - select option 1
        - if it has intel processor - select option 2
            - Don't know if it is M1, M2, etc, or Intel. Click on the Apple logo on the top left.
                - Select "About this Mac" and check your processor type

Step 2: Install R Studio

- Use the following link to install R Studio.
- If you have a Mac:
    - **Important**: When you click on the downloaded file, you will see a window open with applications folder on left and R Studio on right.
        - DO NOT double-click on R Studio logo
        - INSTEAD: Drag and Drop it in Applications Folder

Step 3: Install JAGs and rjsgs package

Windows

- Go to the SourceForge downloads.
- Download the Windows installer and run it.

- In R, run install.packages("rjags").
- Older JAGS versions don’t work with recent R. Make sure you have latest JAGs.

Mac

- From SourceForge, download the software
- Install as you would any other Mac Software
- Restart RStudio, then run install.packages("rjags").

Step 4: R packages:

- Install the package: MCMCvis
